

Sai Charan Vathsavayi

+1-510-815-2527 | vathsavayisai@gmail.com | [GitHub](#)

Professional Summary

Software Engineer with a strong focus on fullstack development, experienced in building scalable web applications using JavaScript, React, and backend technologies. Demonstrated success in enhancing testing pipelines and integrating CI/CD for efficient project delivery. Proven track record collaborating with cross-functional teams to improve UI components and backend services. Eager to leverage fullstack skills and agile methodologies to contribute to innovative AI-powered enterprise solutions.

Education

California State University East Bay, CA

M.S., Computer Science

Aug 2023 - May 2025

Bharath University, India

B.Tech, Computer Science

Jul 2019 - May 2023

Professional Experience

UL Solutions

Software Engineer Intern

May 2024 - Aug 2024

Fremont, CA

- Designed and developed scalable web components and backend services utilizing JavaScript and backend technologies, enhancing user efficiency.
- Improved testing pipelines by incorporating automated unit tests, reducing regression time by 30% and reinforcing performance optimization.
- Assisted in migrating legacy modules to a microservices architecture using Spring Boot, fostering a transition to modern design systems.
- Coordinated with global teams to implement CI/CD practices and agile delivery standards, ensuring seamless integration and deployment.
- Authored detailed technical documentation and onboarding playbooks to support team knowledge and smooth transitions.

Sikharas

Web Developer Intern

Nov 2023 - Feb 2024

Hayward, CA

- Constructed and deployed a responsive website with React.js and HTML/CSS, creating clean, reusable UI components aligned with design system principles.
- Integrated third-party APIs to deliver dynamic content and a streamlined user experience.
- Employed modular design principles to boost maintainability and scalability of the web application.
- Collaborated with a UI/UX designer to implement pixel-perfect frontend components, enhancing overall user engagement.

Self-Initiated Development

Mobile App Developer (Independent Project)

Jun 2024 - Present

- Engineered a cross-platform mobile health app using Flutter and Dart, demonstrating fullstack development capabilities in mobile environments.
- Integrated BLE features for device synchronization while managing tasks with Agile methodologies and Jira-based tracking.

Hamaara

Software Developer Intern

Nov 2024 - Apr 2025

Fremont

- Collaborated on a fintech platform for underserved communities, enhancing security and performance of core services.
- Built reusable UI components with React and integrated them with a Node.js + MongoDB backend, showcasing fullstack development expertise.
- Automated test suites using Jest and Postman, improving API reliability and reducing the need for manual QA.
- Engaged in agile sprints, actively participating in code reviews and cross-functional team design discussions.
- Implemented CI/CD pipelines with GitHub Actions to streamline deployment processes and boost production efficiency.

Key Projects

AI-Based Bug Triage System

- Built a full-stack tool that classifies and prioritizes bug reports using OpenAI's GPT models.
- Designed a Flask backend that analyzes bug titles and descriptions to assign categories and urgency.
- Integrated a React frontend for users to submit bugs and view real-time classification results.
- Added unit testing with PyTest and React Testing Library to ensure robust logic.
- Set up CI workflows using GitHub Actions for automated testing and deployment.

Real-Time Whiteboard Collaboration

- Developed a browser-based whiteboard app supporting real-time multi-user drawing and messaging.
- Used WebSockets to broadcast canvas and chat updates instantly to all connected users.
- Implemented undo/redo, snapshot saving, and fault-tolerant reconnect logic.
- Modularized the UI for performance and easy debugging with browser DevTools.

- Deployed using Node.js with Express and basic authentication for room sessions.

Mobile Wellness App

- Built a cross-platform mobile app that tracks health metrics and syncs with BLE-enabled devices.
- Implemented real-time syncing of vitals using Bluetooth Low Energy (BLE) protocols
- Designed a responsive UI using Flutter widgets and managed state using Provider.
- Stored local health logs and supported custom alerts for abnormal readings.
- Wrote unit and widget tests; used Flutter DevTools for performance optimization.

DevOps Portfolio Monitor

- Created a personal dashboard to track GitHub repo status, build health, and recent commits.
- Fetched live data from GitHub API and stored analytics logs in MongoDB.
- Containerized the backend using Docker for consistent deployment across environments.
- Integrated GitHub Actions to monitor changes and trigger health checks on push events.
- Designed a simple web frontend to view status, commit history, and CI/CD results.

Campus ChatGPT Assistant

- Developed a chatbot to answer college FAQs using GPT-3.5/4 via OpenAI API integration.
- Built a FastAPI backend with endpoints to handle question prompts and return GPT-based replies
- Used React to design a chat interface with input history and response streaming.
- Stored Q&A pairs locally and optionally to Firebase for persistent access.
- Ensured safe prompt usage, basic error handling, and custom context injection.

Technical Skills

- **Languages:** Python, Java, JavaScript, Dart, C++, SQL, HTML/CSS
- **Frameworks & Backend:** React.js, Spring Boot, Flask, Express.js, Backend technologies
- **Tools & Performance:** Git, GitHub, Docker, Jira, Jenkins, CI/CD, APIs, Developer tooling, Performance optimization
- **Concepts & Development:** OOP, Data Structures & Algorithms, Agile/Scrum, Fullstack development, Design systems, Component libraries, Generative AI, Machine Learning
- **Mobile:** Flutter, BLE Communication
- **Database:** MySQL, MongoDB
